PRESS RELEASE: MARCH 2004, LONDON

MARGINCLICK ANNOUNCE EXCEL GUI & SPREAD TRADE BLOTTER IN VERSION 1.2

MarginClick, the on-line margin calculator, has now been upgraded to a new version, 1.2. A number of new features have been included based on user input and recent market events. Major new areas of functionality include a complete Excel front-end, easy to use 'Spread Trade Blotter' for 'what if' scenarios and new style reports.

'With a growing number of clients and distribution channels, including broker white-labelling and ISV end users, we have developed a new range of features to satisfy growing demands of the product', says MarginClick Managing Director, Patrick Thornton-Smith.

'The new Excel front end now offers a choice of user interfaces as many end users typically utilise this spreadsheet to access and manipulate market data. With an increasing focus towards intra-day risk based margining, such as the LCH.Clearnet IDRIS initiative, a growing number of market participants are looking for an easy to use 'what if' ability to assess margin obligations.

For spread traders especially we have developed the Spread Trade Blotter to assist this process.' Add's Thornton-Smith.

Other features include a new style report that gives users an easy to use, selectable PDF on-line with multiple sorting criteria. As with the full application, this can also be white-labelled. This latest version of MarginClick is released in conjunction with an updated website.
